## Overview

My research interests broadly lie in **Deep Learning** within real-world applications, with some emphasis on **Computer Vision**. I'm also greatly passionate about expanding my skills to **Multimodal Learning** and **Explainable/Interpretable AI**. My current research focuses on Computer Vision methods (Object Detection) in detecting lung nodules for lung cancer in CT scan images. Moreover, I have authored a paper in this field and collaborated on two other papers in the context of real-time facial emotion recognition (Image Classification).

**Research interests:** Deep Learning, Multimodal Learning, Computer Vision, Medical Applications in Deep Learning
