## Overview

My research interests broadly lie in Deep Learning, with an emphasis on Multimodal Learning and Computer Vision, particularly within real-world applications and challenges, such as in the medical and healthcare domains. My current research focuses on Computer Vision methods (Object detection) in detecting lung nodules for lung cancer in CT scan images. Also, I have authored a paper in this field and collaborated on a few other papers in the context of real-time emotion recognition (Image classification).

**Research interests:** Deep Learning, Multimodel Learning, Computer Vision, Medical Applications in Deep Learning
